Matthew Carbone

Cornell University's new Architecture, Art, and Planning building, Milstein Hall, is thoughtfully intertwined with the existing historic buildings. The three story building includes flexible studio space on the upper plate, a pedestrian plaza and auditorium on the ground level, and a critique space and gallery below grade. The lighting systems were carefully designed to amalgamate to the unique ceiling design at each of the three levels with some unexpected lighting interventions woven in. Fixture and lamp selections compliment the building aesthetic and the specific function of each floor.
