This project was one of our first extensive uses of 3D lighting simulation software which allowed us to study and compare a variety of design solutions. The rendered concept was extremely accurate when compared to the final results.” —Attila Uysal

“We are pleased that we were able to successfully achieve the lighting concept even through numerous value engineering changes during both the design and construction phases. As with many public projects, maintaining the integrity of the design was challenging but critical to achieve the desired effect.” —Susan Brady
